

NEWSLETTER FEBRUARY 2009

Dear Client,

Lungworm

Please order Huskvac, as other years, in good time. Cost £3.48 per dose.

Bluetongue

We still advise that you should protect your animals now with the bluetongue vaccine before turn-out. If we have a “normal” summer the risk of bluetongue re-emerging or spreading over from the continent is high.

Intervet, who manufacture the BTV-8 vaccine which we currently stock, now say that it is safe to use at the same time as Leptavoid-H, Heptavac P, Bovipast RSV and on the 2nd day of a TB test, but not on the 1st day of a TB test or within 2 weeks of fluke and worm treatments, IBR vaccines or any other treatment.

Drug prices are coming down!

We have managed to secure better deals for a large number of the drugs we supply. As a result we have been able to extend our discount scheme to include more products at even lower prices.

Now all intramammary preparations (dry cow and milking cow tubes) and most vaccines, footbaths and injectable antibiotics will be available on the drug discount scheme.

To get your drugs at the discounted price the same rule applies as before – **the balance of your account must be cleared every month.**

	<u>Discounted selling price (ex VAT)</u>
Cepravin DC - 20's / 120's / 160's	£32.41 / £198.50 / £259.28
